

BRAINSTORM & IDEA PRIORITIZATION

Ideation Phase

Project: Electric Vehicle Analytics Dashboard using Flask & Tableau

Project Information

Date	_6 july 2026_____
Team ID	_____
Project Name	Electric Vehicle Analytics Dashboard
Maximum Marks	4

Introduction

This brainstorming activity follows the structure of the Mural 'Brainstorm and Idea Prioritization' template. The objective was to identify, discuss, and prioritize ideas for an analytics solution addressing the growth of electric vehicles in India. Ideas were evaluated using feasibility, impact, and data availability.

Step 1 – Define the Goal

Goal: Develop an interactive analytics platform that enables users to explore electric vehicle adoption trends, manufacturer performance, state-wise registrations, and other key insights through Tableau dashboards embedded in a Flask web application.

Step 2 – Brainstorm Ideas

Idea	Benefit	Feasibility	Priority
State-wise EV Registrations	Regional insights	High	High
Manufacturer Analysis	Compare brands	High	High
Charging Infrastructure	Infrastructure planning	Medium	Medium

Vehicle Category Trends	Adoption analysis	High	High
Government Incentives	Policy awareness	Medium	Medium
Environmental Impact	Sustainability	Low	Low

Step 3 – Prioritization Matrix

Highest Priority:

- State-wise EV Registration Analysis
- Manufacturer Performance Dashboard
- Vehicle Category Analysis

Medium Priority:

- Charging Infrastructure
- Government Incentives

Low Priority:

- Environmental Impact Estimation

Selected Solution

The team selected the Electric Vehicle Analytics Dashboard because it combines readily available datasets with interactive Tableau visualizations and a Flask web interface. The solution provides meaningful insights for students, researchers, and decision-makers.

Expected Outcomes

- Interactive Tableau dashboard
- Embedded Flask website
- State-wise EV insights
- Manufacturer comparison
- Improved understanding of EV market trends

Conclusion

The brainstorming session resulted in selecting a feasible, impactful, and data-driven project. The chosen solution aligns with sustainable mobility initiatives and demonstrates data visualization and web application development skills.
